

**What We Do**

**Wireless**

**Bridging Systems**  
**Access Systems**  
**Free Space Optics**

**WIRELESS BRIDGING & ACCESS SYSTEMS**

**NCS Data Systems** specializes in alternate communications and network bridging, including Cisco wireless bridging and access points, along with free space optics, such as Light Pointe and Canon's Canobeam.

**NCS Data Systems** installs Cisco wireless bridging solutions to augment building-to-building LAN bridging with a 'Zero Tolerance' of downtime.

**NCS Data Systems** provides wired and wireless site surveys and has the installation experience to identify possible environmental, structural and interference problems and recommend remedies to eliminate them.

**NCS Data Systems** technicians are well-trained and kept current on the latest technologies and security features of the wireless local area networking (WLAN) technology.

**NCS Data Systems** applies the latest Wi-Fi protected access (WPA) security specifications for WLAN's to increase the integrity and security of your data.

**NCS Data Systems** has installed both 2.4 GHz and 5.0 MHz band Wi-Fi access systems. Some of the clients that have utilized our services include:

- Reynolds & Reynolds
- Marshall's Department Stores
- Union Pacific Railways
- Barnes & Noble
- TJ Maxx Department Stores
- CompUSA

**NCS Data Systems** offers a blend of installation and security services, providing the most secure and simple method to extend your local area network without cumbersome and often expensive fiber or copper cabling.

**NCS Data Systems** will dispatch a qualified team to do a survey of your site and determine the definitive location for your installation. Then it will install the safest and most reliable bridging solution for your local area network.

**NCS Data Systems** is the solution for your wireless survey, installation and service needs. Call today and discuss your needs with a highly experienced engineer.
